

dolphin

New Edition

The engineers and designers of the Danish company Winther have further enhanced the well-known Dolphin cycle trailer to make it even more user-friendly. The exciting changes have resulted in optimised safety, additional comfort and improved riding performance. The Dolphin offers the perfect combination of a safe trailer and a chic buggy.

Small on the outside, big on the inside

A headroom of 70 cm means there is enough room for larger children as well. Despite its generous internal space, the Dolphin is the narrowest 2-seater child cycle trailer in its class with a total width of less than 80 cm. This narrow width is a big advantage especially when the trailer is used as a buggy, for example in a lift or on an escalator.

Flexible hood - optimal ventilation

The flexible hood is highly versatile and is fitted with an insect net and sunscreen. The side windows of the Dolphin can be opened with a zip and thus offer first class ventilation. The children are still protected by the sun net.

The hood has reflector strips on all sides to ensure that it is highly visible in traffic. The logos are also made of reflective material. The rear has a clear yellow colour that can easily be seen in traffic.

Comfortable interior

Another unique product feature is the adjustability of the back rest to allow a comfortable sleeping position. The seats and belts have soft padding. The flexible 5-point safety harness guarantees optimal safety in the shoulder and pelvis area and is very user-friendly. A child can now easily be strapped in the centre. On each side of the cabin there is a large removable pocket made of hard-wearing fabric that can be handwashed at a maximum of 40 °C (as can the belts and seat padding).

Flexible and user-friendly
5-point safety harness guarantees optimal safety.
Safety harness, seat padding and bags are washable.

Optimal ventilation
The side windows can be opened easily with a zip.
The front window can be rolled up and stored between the net and the hood.

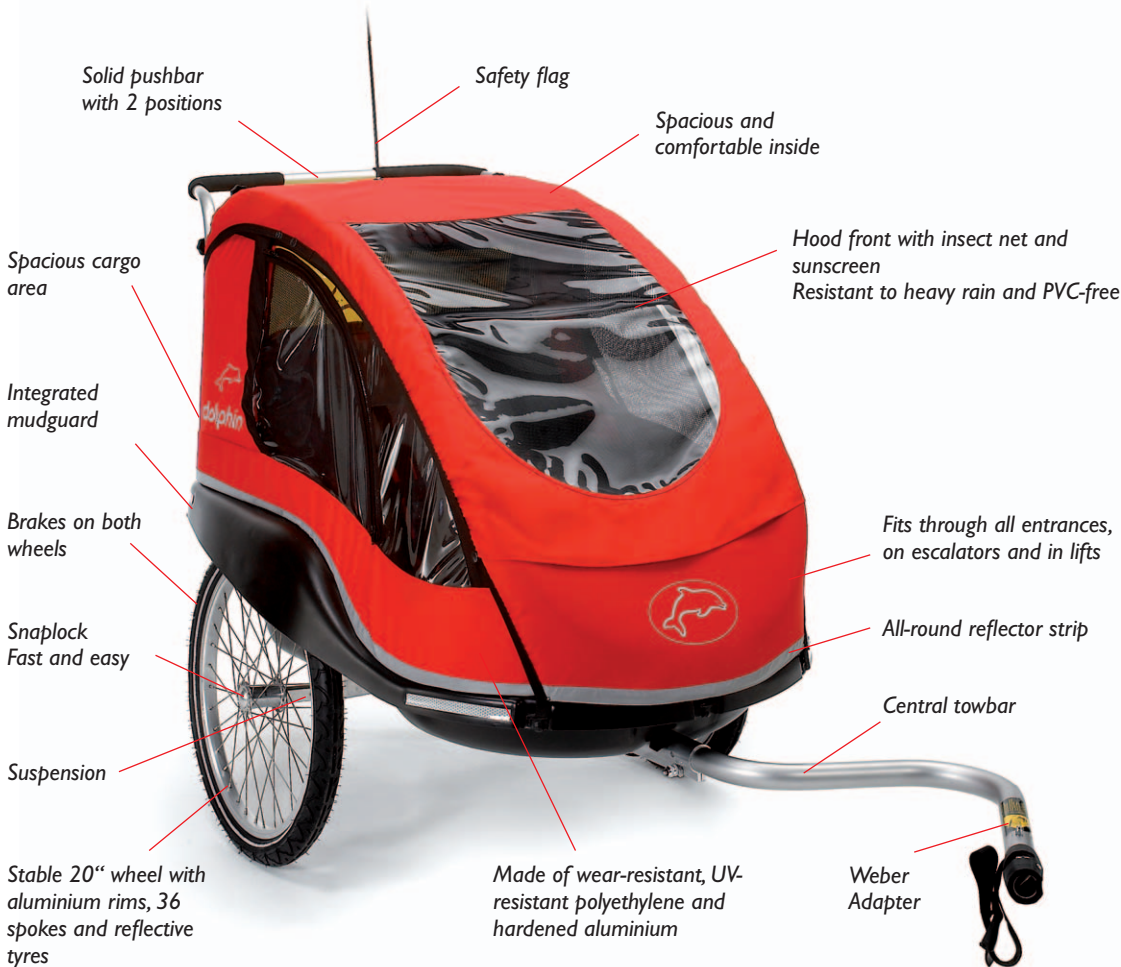

dolphin

The Dolphin has a harmonious, aerodynamic design with an integrated mudguard. A shortened towbar and optimal wheel suspension guarantee ease of running and a pleasant ride. The solid floor combined with low seat height and wide wheelbase have an impact-repellent effect and the aluminium frame offers maximum protection. Holes at the very front of the chassis ensure ventilation and are also used to lock the trailer securely. The

Dolphin can be folded up small without the need for tools. There is a generous cargo area behind the seats. The solid back rest on the seats allows the cargo area to be fully loaded without impairing the back position of the children. The low position of the cargo area produces a low centre of gravity. This helps optimise the riding properties of the Dolphin. It is also possible to fit rear lights.

Technical Data			
Weight with handle	13.3 kg	Leg room in the centre, from the back rest	58 cm
Wheelbase	77 cm	Seat area	20 x 54 cm
Total width	79 cm	Headroom from seat	70 cm
Dimensions with towbar and handle	172 x 79 x 99 cm	Elbow width	65 cm
Dimensions folded (LxWxH)	101 x 79 x 39 cm	Maximum load	50 kg

The Dolphin comes with a safety flag, towbar and Weber adapter.

The hood has an insect net and sunshade and can be set in several positions.

Large integrated cargo area with a low centre of gravity.

The towbar and buggy wheel can be easily fitted using a spring button and can be fastened using quick release clamps.

Accessories

Buggy wheel
The Dolphin can be easily converted into a buggy using the buggy wheel.

Weber baby seat
Can be securely fastened in a flat position.
